NETWORKING CMMS SOFTWARE

NETWORKING CMMS SOFTWARE

1. Install software on each computer or work station access will be needed.

2. Activate software on each computer or work station the software is installed.

3. Copy the databases to be used to a shared or mapped hard drive.

4. Configure each client's CMMS software to point to where the databases are stored.

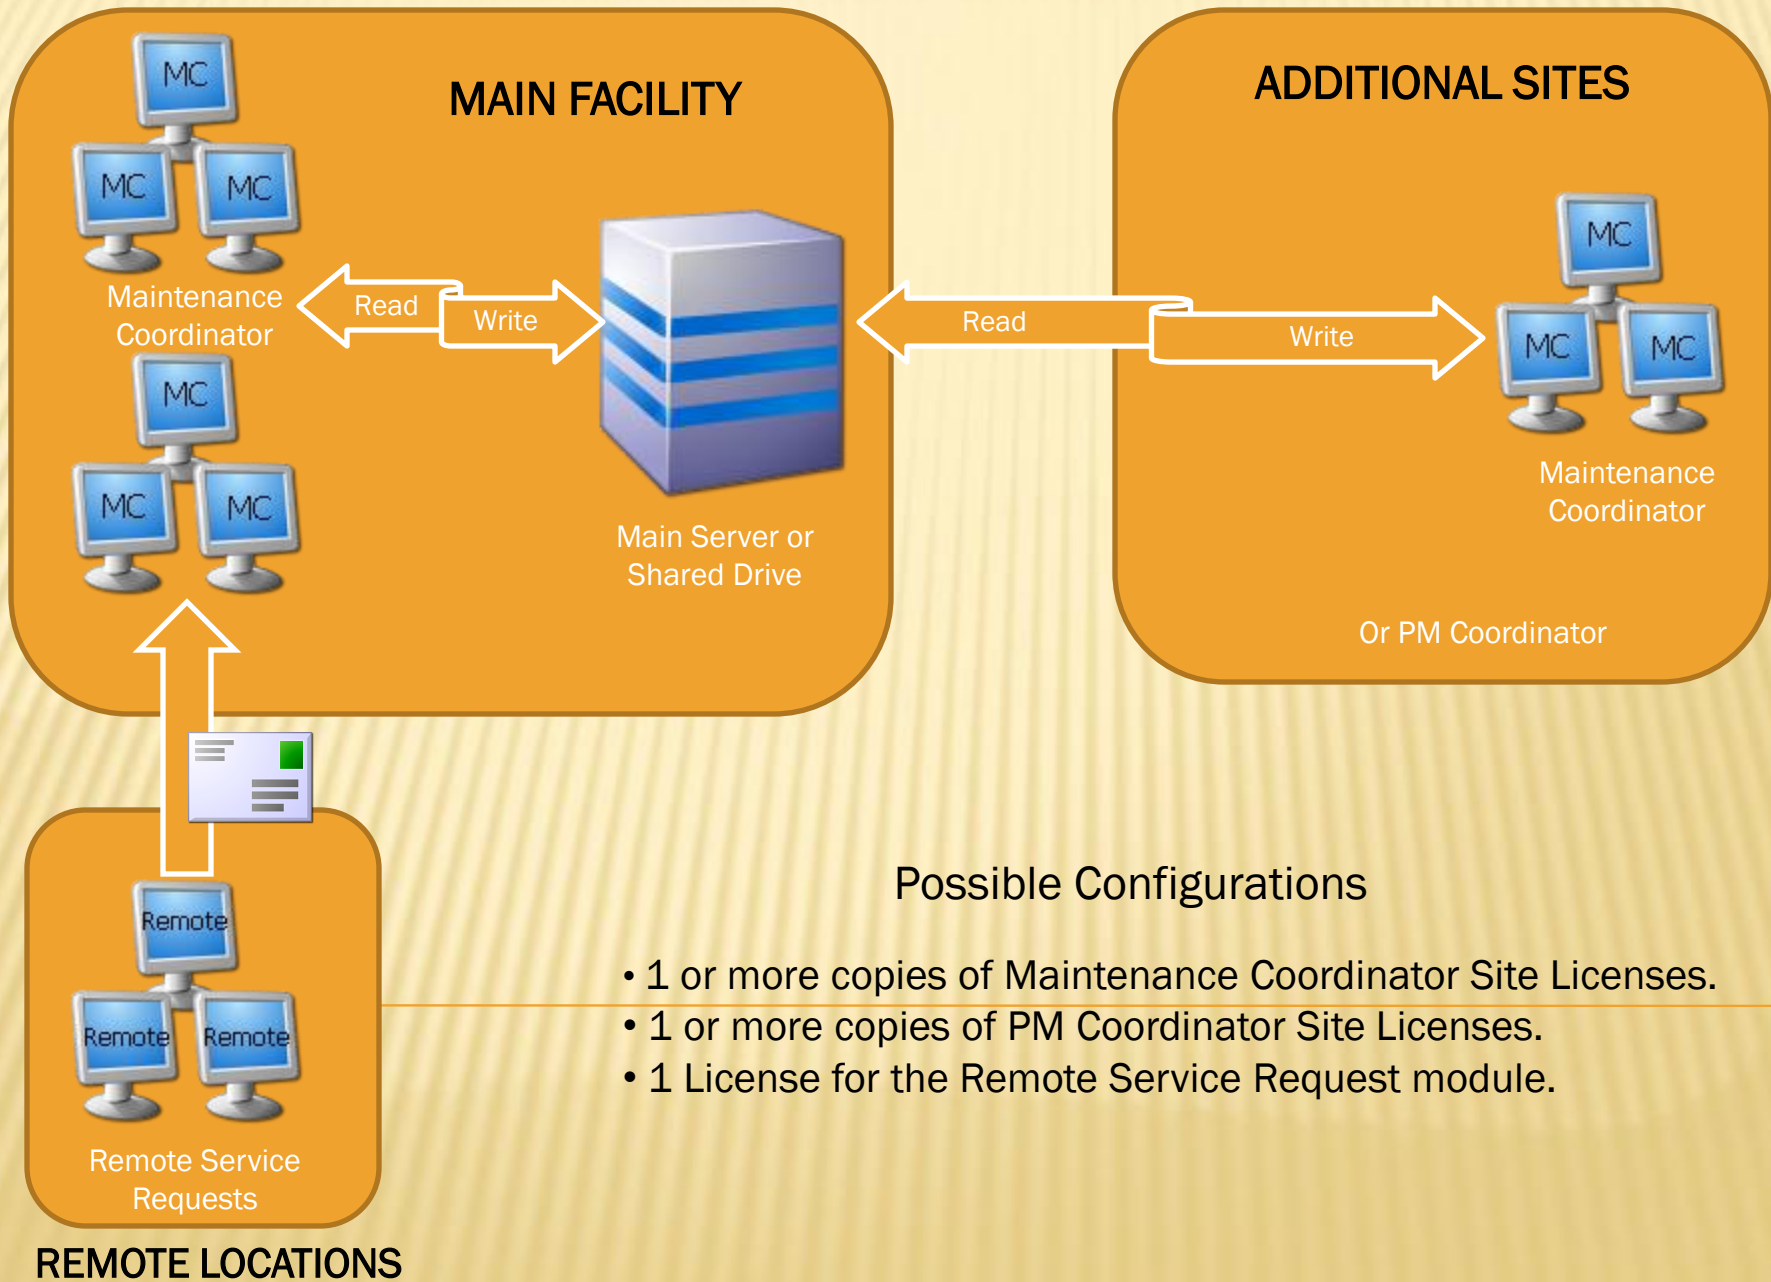

5. Begin enjoying the software.

NOTE: A Site or Network license must have been purchased to use this configuration.

NETWORKING CMMS FOR MULTIPLE SITES

Possible Configurations

- 1 or more copies of Maintenance Coordinator Site Licenses.
- 1 or more copies of PM Coordinator Site Licenses.
- 1 License for the Remote Service Request module.

NETWORKING CMMS SOFTWARE FOR MULTIPLE SITES

- ✘ For every facility the software is installed and the databases are to be shared, a SITE license is required. A single facility = a single address or physical location.
- ✘ It is perfectly acceptable to mix Maintenance Coordinator and PM Coordinator's databases. However each site will need to be licensed for the software used at that facility.
- ✘ A single license is all that's required to use the Remote Service Requests module at as many locations as needed. This module uses email for work requests which are imported into Maintenance Coordinator.
